

## **PRODUCT REVIEW**

### **PORTAL-CABLE PCE345 6-Ampere Orbital Jigsaw**

The last and the best Jigsaw tool that I highly recommend is the PORTAL-CABLE PCE345 6-Ampere Orbital Jigsaw. You will be completely amused to see its features and capabilities. The biggest plus point of the tool is its price, that is not more than \$70 in the various different marketplaces and online shopping platforms. One of the most demanded feature that should have to be the part of every jigsaw tool is the speed setting of the machine. It is an amazing fact that the PCE345 Orbital Jigsaw has 7 different speed variants from 0 up to 3200 SPM. You can set these speeds through the knob just given on the grip of the jigsaw. In order to make your crafting and working cuts optimal, there is an absolutely remarkable feature of 4 orbital settings. The one of the greatest dominance of the product is the easy replacement of the blades through tool-free blade changing feature. This really makes you comfortable in replacing the blades. The newest feature of the product is lock-on button which

allows you to use it for a long-term job. Probably, it is the best featured jigsaw that you can have under \$100. Just there is a lack of dust filter.
