

HOW TO REMOVE ACTIVATE WINDOWS WATERMARK

Since the development of the latest versions of Windows, it has been noticed that often a watermark comes at the right corner of the desktop that shows the message "Activate Windows - Go to Settings to activate Windows". This watermark turns out to be troublesome for many windows users and obviously, they need it to be removed. In this article, we will take a look at why this watermark appears on the Windows screen, and **how to remove activate Windows watermark**. So let's discuss these matters in detail below.

Reasons Due to Which Activate Windows Watermark Appears:

Ahead of the discussion about **how to remove activate windows watermark**, let us first ponder over other reasons due to which this watermark crop up on the screen. There are numerous reasons behind the appearance of this watermark. The first and the most common reason could be the expiry of the windows that you are using. The other reasons are briefly described as under:

Windows Version Unmatched:

Sometimes the windows version can be the reason due to which the activate Windows watermark may appear. For example, you have installed windows 10 ultimate edition on your PC and the product key that you have purchased is of windows 10 professional edition. Now it is to be noticed that the product

key is accurate but due to the different version of the Windows, the activate Windows watermark may appear.

Invalid License of Windows:

There may be an issue with the invalid license of the windows that you are using due to which the activate Windows watermark reveals on the desktop screen. But how can be your Windows license invalid? This is because when an ordinary user inputs the required windows key from different online sources across the internet, there is a fair chance that the key may be duplicated. Due to the use of this duplicate product key, Microsoft cancels the license of the Windows. As a result, we can see the activate Windows watermark on the screen.

So these were some of the reasons on account of which the Activate Windows watermark appears on the display screen. Now let's go further towards the methods and procedures that aid us how to remove windows watermark.

Removing Activate Windows Watermark:

There are 8 different methods we need to know for removing this problem. We will discuss them one by one further.

Method#01: Through Regedit:

Regedit can be very effective for the removal of the Activate windows watermark. Here is a procedure how it works:

- Search "Run" on the search bar given on Taskbar below. The Run screen will appear.
