

PRODUCT REVIEW

Bosch JS470E Jigsaw

When talking about the best jigsaws in the marketplace, we can't ignore the JS470E by Bosch Tools Company. The product is topnotch in all of its aspects. The most interesting thing that I found about this tool is its tool-less blade system. I completely adore this feature. This exceptional feature allows you to replace or eject the blade without the use of any other tool. Another fascinating thing which I like very much is the variable speed functionality of this Jigsaw. You can easily set speed of the saw up to 3100 SPM. I was surprised to see the dust blower along with this tool. This blower really provided much ease regarding the removal of saw-dust just after using the tool.

I must say without any doubt that the Bosch JS470E Jigsaw is one of the perfect and high quality jigsaws that one can work with. Another beautiful feature of this tool that I loved to see is that it can cut and craft not only the wood pieces, but steel and many

other materials too. What else is needed when you have the best jigsaw available which allows you to cut at least 6 inches of wood in the finest and accurate style?
