

## **PRODUCT REVIEW**

### **TECCPO TAJ501P 3000 SPM Jigsaw**

The TECCPO TAJ501P 3000 SPM Jigsaw is the most reliable jigsaw that you can have for your wood-crafting purpose. The perfectly versatile tool works through the much needed 6.5 ampere motor. You will surely express admiration towards the tool as through this sturdy sawing tool, you can easily manage to achieve a number of wood-crafting tasks like shaping, cutting, resizing, etc. The shape and the holding grip of the jigsaw is eminently comfortable and you will really love its handling. Moreover, you can regulate the tool's speed as per you requirement of work and this can be considered as the most flexible feature that a jigsaw can ever offer. Due to its relatively lighter weight of almost 5.5 pounds, the portability of the tool increases thus providing you another suitable hallmark. The powerful capabilities that would attract you towards this tool are 4 positional orbital settings, switching angle of about 0 to 45 degrees, and the dust removal filter. The filter has a switch and two different portions from which the dust can be rolled out. When you forward push the switch, the dust

particles will blow away and when applying backward push to the switch, the dust particles shall follow the rear path to blow away from the tool.
